

**COPA COMPANION**

**FIFA WORLD CUP 2026 · GENAI**

# **Your AI matchday concierge for the World Cup.**

One assistant. Any language. Finds your gate, skips the queue, and gets you home — in real time.

A GenAI stadium-operations project · swipe →

## THE PROBLEM

# 80,000 fans. Everyone lost at once.

*"Mi entrada dice Section 428, Entry K... ¿dónde es eso?"*

— Diego, 34, first time in the US, speaks only Spanish

- Ticket codes mean nothing to a first-time visitor
- His gate has a 45-min line. Another is empty. He can't know.
- Every sign, announcement and staff member speaks English
- After the whistle, 80k people exit into the same trains

## THE SOLUTION

# Not ten apps. One **assistant**.

Copa Companion answers anything about **this match, this stadium, this moment** — grounded on a stadium knowledge pack so it advises, never hallucinates.

Navigation

Crowd management

Multilingual

Transport

Voice

Ops intelligence

Accessibility

**Two personas, one engine.** The same live data serves the fan (personal advice) and the organizer (crowd intelligence).

## FEATURE 01 · NAVIGATION

# Ticket in. Gate out.

Paste your ticket line — *"Section 428, Row 12"* — and the app maps it to your level and assigned gate instantly.

### **Section 428 → Gate K**

Upper Concourse · south side, main plaza entrance. Directions generated in your language, using landmarks — not a flaky indoor GPS dot.

## FEATURE 02 · LIVE CROWD

# Skip the 45-minute line.

A live queue feed turns raw wait times into a decision: your gate is jammed, another is clear, walk 5 minutes west.

GATE K

42

GATE A

18

GATE M

8

GATE F

6

**Auto-reroute:** "Tu entrada K tiene 42 min. Entrada M, 8 min — camina 5 min al oeste. Todas las puertas aceptan tu boleto."

## FEATURE 03 · MAPS

# Exactly where you are — and how long to go.

One tap shows your live position on a map, the driving route to the stadium, distance and a real ETA.

**31 km · ~25 min driving**

Nearest gate on arrival: Gate E (3 min queue). Powered by OpenStreetMap + OSRM — free, no API key.

**Privacy by design.** Your GPS coordinates never leave your browser — only the distance number reaches the assistant.

# Ask in your language. Or just say it.

- Type or speak — 40+ languages from one knowledge pack
- Voice input via the browser's native speech engine — free
- Replies in the same language the fan used
- Grounded answers: gates, food, bag policy, first aid, prayer room

**Why GenAI?** A static app needs every screen pre-translated and every FAQ pre-written. One LLM handles infinite phrasings in any language from a single source of truth.

# The same data, for the people running the show.

Organizers get the crowd state summarized in plain language, with a recommended action.

## ⚠ Ops alert

"1 gate above 30 min. Gate K inflow 3× normal — recommend redirecting arrivals to Gate M (8 min) via signage and app push."

**Real-time decision support** — the biggest crowd-safety lever, from the data you already have.

BUILT WITH

# Lean stack. Real engineering.

Google Gemini

FastAPI

Leaflet / OpenStreetMap

Web Speech API

Docker / Coolify

- API key stays server-side — never in the browser
- Runs offline with a rule-based fallback
- Validated inputs, automated tests, accessible UI
